Accessibility Testing for a Mobile World

The Level Access Mobile Accessibility Suite combines on-device testing, native mobile rules, and centralized evidence into a single system that's as connected and intentional as the experiences you are building. Teams of all skill levels will have the tools they need to find, fix, and prove accessibility issues—and prevent them from recurring.

Designed for every role to test anywhere, on real devices

On-Device Testing (ODT) and Live App Testing enable developers, QA engineers, and non-technical users to validate accessibility directly within the environments they already use. Whether scanning physical devices in real time or leveraging cloud-based testing with no setup or scripting, these tools make accessibility effortless.

Our suite supports real devices, simulators, and emulators, so teams can confidently demonstrate accessibility on the hardware their users rely on. And with training readily available, every role can quickly build the foundational understanding they need to turn skills into immediate impact.

Native mobile rules for maximum coverage

Our solution leverages native mobile rules specifically designed for gestures, platform behaviors, and navigation patterns. Built into Access Engine, these rules remove the guesswork from testing by guiding teams toward the highest-impact issues with the broadest coverage—without compromising quality or flexibility.

One platform, one standard

Centralize all mobile accessibility findings in a single dashboard that turns raw data into actionable insights and defensible reports. The Level Access Platform syncs test results directly with developer workflows and applies a consistent standard across mobile and web assets, so your teams gain the clarity and accountability they need to make accessibility sustainable and successful.

Solution overview

Live App Testing

Fast, no-code mobile accessibility scans on real or virtual devices

Mobile Testing

Ready-to-scale accessibility testing, right out of the box

On-Device Testing

Flexible accessibility testing directly on the devices you already use

Native Mobile

The broadest mobile coverage to catch critical issues with complete confidence

Reporting Agent

Clear, actionable accessibility reports available in seconds

Consolidated prioritization tools

Consolidated findings and advanced tools to turn issues into action

Unified Dashboard

A single, actionable view of all accessibility findings

> "The partnership with Level Access has been exceptionally valuable to ensure the software we design is aligned to the accessibility needs of people and organizations around the world."
>
> *— Sam Thorpe, Chief Product Officer, Nitro Software*

The Level Access Platform's project management integration enabled Honeylove to streamline accessibility issue remediation, reducing the proportion of developers' time devoted to accessibility-related administrative work from 50% to 10%.
